

**Maxim Textile Technology Sdn Bhd (“Maxim”) Launches Successful Mangrove Replanting Initiative to Combat Climate Change and Restore Coastal Ecosystems**

*Tanjung Piai Mangrove Tree*

9 December 2024 – Maxim Textile Technology Sdn Bhd a subsidiary of Ghimli Group of Company, is proud to announce the successful completion a groundbreaking mangrove tree replanting initiative aimed at combating climate change, restoring vital coastal ecosystems, and promoting environmental sustainability.

Mangrove forests are critical to the health of coastal environments, providing protection from storms, supporting biodiversity, and acting as natural carbon sinks. However, mangrove ecosystems worldwide are being threatened by deforestation, coastal development, and climate change. Recognizing the urgent need for restoration, Maxim's launched this initiative to restore degraded mangrove habitats and contribute to global efforts in mitigating climate change.

This Corporate Social Responsibility (CSR) initiative was collaborated with Tanjung Piai National Park and was made possible by 20 pax employees from Maxim that took part in planting about 200 mangrove seedlings along a designated area in Tanjung Piai National Park.

Looking ahead, Maxim's plans to expand its mangrove restoration efforts to additional coastal areas, with an emphasis on creating self-sustaining ecosystems and promoting sustainable practices within the regions. The company is also exploring partnerships with other organizations to amplify the impact of this initiative.
